What is Waterjet Cutting?

The waterjet is able to cut any 2D design on any material. Materials cut by the machine have a smooth, satin-like finish, similar to a fine sandblasted appearance. We can work directly from computer generated artwork or scan your drawings and sketches. Waterjet cutting opens your design to new horizons. You are not limited to bars and stock shapes. Let your imagination run wild! If you can think it, we can make it!

Applications (all custom)

- Railings and Gates
- Decorative security bars
- Business logos
- Address signs
- Manufactured parts
- Furniture / table tops
- Artwork / sculptures
- Light fixtures
- Mirrors
- Drain covers
- Mozaics
- Decorative Landscaping pieces
- Wall dividers
- Gaskets

Materials that can be cut

- All grades of Steel
- Hardened Tool Steel
- Mirror-finished Stainless Steel
- Stone (Marble, Granite & Limestone)
- Plastics (Acrylic & Poly Carbonate)
- Ceramics & Porcelain
- Glass / Mirrors
- Copper
- Inconel
- Titanium
- Rubber
- Foam
- Wood
- Leather

Overview

The Abrasive waterjet is an industrial CNC (Computer Numerical Control) tool capable of cutting a wide variety of materials upto 6 inches thick, using a high pressure pump shooting the water 3 times the speed of sound. The cutting accuracy is very precise and produces intricate shapes with a tolerance of +/- .005".
